

## COMBINATION BOILER ESTIMATES

**Central Heating or Plumbing Problems?  
If water runs through it, We can do it!**

Please find our initial estimate for the replacement of your combination boiler and flue. Hopefully, this estimate resides within your budget and you will ask us to proceed.

Upon your instruction, we will arrange a home visit to survey the installation site and to answer any questions or concerns you might have.

Please note we can fit any boiler of your choice. The boilers listed here are by far the most popular units, tried, tested and installed in thousands of homes.

When installing a new boiler onto an old system, boiler manufacturers recommend carrying out a power flush cleansing process of the central heating system prior to installing the new boiler in order to maximise the benefits of your new boiler.

Please request information or visit our website at [www.power-flush.co.uk](http://www.power-flush.co.uk) to learn more about the benefits of a power flush. Fox and Co mains flush the system as a matter of course, but will bring it to your attention if a more thorough cleansing of the system is thought to be required.

Please note there is an additional charge if the siting of the replacement boiler is not in the same position as the old boiler as this obviously involves a lot more work.

In order to comply with Gas Safe and manufacturers regulations it may be necessary, if one isn't present already, to run a new 22mm gas supply to the boiler as the existing pipe (if it is 15mm) may be inadequate to supply the boilers needs. If we are instructed and find a 22mm gas supply close to the site of the boiler there will be no additional charge, but if it is necessary to run a new gas supply in 22mm, then an additional charge may be levied.

When your installation has been carried out, the work must be registered with your local authority for building regulation purposes. On completion and payment in full, the installing Gas Safe Registered engineer will do this on your behalf through a recognised body and you will receive the certificate of compliance in due course. You will need the documented proof when you sell your property. This service is included as part of the job.

Please do not hesitate to contact me on my mobile number: 07958 500 900 or by email [mail@foxandco.co.uk](mailto:mail@foxandco.co.uk) if you have any questions regarding the contents of this estimate.

# Combination Boiler Estimate

## About Us:

Being a small family firm we are, subject to acceptance, usually able to carry out the work with a minimum of delay. We will, subject to instructions, require a pre-payment payable by credit card prior to the installation to cover initial costs.

All work is carried out cleanly and efficiently by skilled non-smoking Gas Safe registered tradesmen and on completion of works all debris is removed and work area is vacuumed and tidied up. The engineer, on completion of the installation will demonstrate to the client how to operate the boiler and will answer any questions regarding the installation or boiler. The bench mark book is filled out and the installation logged online with Gas Safe, thereby ensuring your boiler is both legally installed and registered as per Gas Safe and manufacturers requirements.

## Tradesman:

Michael De Havilland: Heating Engineer, Plumber, Handyman & Jack of all trades.  
English, 58, Family man, with 3 children, 14, 17 & 19.  
30 years Plumbing & Heating experience.  
27 years living at present address in Muswell Hill.

## Qualifications:

Gas Safe Registration: Number 230523  
ACS Core Gas Safety & NVQ II  
Elements: Central Heating, Pipe work, Water Heaters, Gas Fires, Gas Cookers & Meters.  
G3 Qualification for Unvented Hot Water Cylinders  
Energy Efficiency Qualification
